

We've got you covered

Bulk, cargo and container handling with cranes on barges, transshippers or as fixed installed solution are an established part of logistics chains around the world. Decisive factors for success in this business are reliability, speed and flexibility. These characteristics are also becoming more and more important for cargo handling.

Our portfolio of port and transshipment solutions includes permanently installed port cranes as well as transshipment cranes. They all have one thing in common: Customers everywhere benefit from fast handling speeds in continuous operation at 24/7 level.

With the CBG 500 E, we also offer an all-electric handling solution. The crane is equipped with electric drives that use the available energy efficiently and operate in an environmentally friendly manner. The all-electric CBG 500 E has a boom length of up to 50 m and handles up to 2,000 t per hour. In sheltered water the maximum load capacity in grab operation is 90 t and in open water 65 t.
